For us, two decades is a major milestone.

For Emanta, it's surviving a collapsed lung at only 18 months.

After 20 years of caring for children, we've got a lot of causes to celebrate.

Emanta arrived at The Bristol-Myers Squibb Children's Hospital with a severe case of the flu. When our team saw she had a collapsed lung, she became our first pediatric patient to receive extracorporeal membrane oxygenation (ECMO). This life-saving treatment allowed her lung to rest and heal, and today she's living the active toddler life she deserves. We opened our doors 20 years ago to improve the lives of kids like Emanta, and today we are a nationally recognized pediatric specialty center with a state-designated Pediatric Trauma Center. Together with Rutgers Robert Wood Johnson Medical School, we're training tomorrow's pediatricians and developing tomorrow's treatments. Learn more at **rwjbh.org/BMSCH**
